

TIMBER SHAPING

BRACKETS, CORBELS & RAFTER TAILS

For over a decade, Davis-Hawn has been cutting raw timbers and beams (as large as 12" x 24") into beautifully crafted brackets, corbels and rafter tails for timbered cornices, porches, pergolas and arbors/trellises.

Utilizing two 36" bandsaws, a Falberg portable timber bandsaw (with 18" cutting capacity for end details on long timbers), beam saws, spindle sanders and other sanding equipment, our craftsman can meet your project's specifications with finely crafted detail. In addition, we have over 130 templates in our millshop, including the following:

SPECIES AND TEXTURES AVAILABLE.

- Western Red Cedar
- Douglas Fir
- Cypress
- Pine
- Oak
- S4S (Smooth 4 Sides) or Rough Texture
- All cut profiles are sanded smooth
- Hand-hewn and distressed look available
- Air-Dried "Green" or Kiln-Dried (KD)

KD is preferred for trusses, delicate brackets or when the typical checking & splitting that naturally occurs with green timbers must be minimized. Antique salvaged beams and timbers are also available (by special order, but we keep a limited number of shorter antique beams in stock).
